Supply of technical publications for FACC interior - cockpit and cabin - according to specification S1000D

FINAL | RELEASED | v03.00

page 1 / 1

HICO is contracted by FACC to produce technical documentation for the interior of the twin-engine passenger aircraft C919 of the Chinese aircraft manufacturer COMAC. The scope of services includes the S1000D system implementation, the operation of the S1000D solution, the process engineering services as well as the preparation and delivery of the technical publications according to S1000D v4.1.

FACC has again awarded a contract to HICO for the preparation of structured technical documentation. Specifically, this involves the creation of the "Aircraft Maintenance Manual (AMM)" and "Aircraft Illustrated Parts Catalog (AIPC)" according to Spec S1000D v4.1.

The integrated material management system developed by HICO is used to ensure the consistency and integrity of the material data in the spare parts catalog.

As a globally active aviation supplier, we face the challenge that we have to react flexibly and quickly to the very different requirements of the aircraft OEM's.

HICO has proven to be a reliable and responsible partner of FACC for the implementation of documentation solutions according to the specification of the ATA e-Business Program and the S1000D specification. FACC particularly appreciates the cooperative teamwork with HICO. We also benefit from HICO's knowledge of the international practices and requirements of various OEM's and 1st tier suppliers.

[Mr. Wolfgang TÖTZL; FACC Director of ILS and Product Support Engineering]

"HICO's many years of experience in handling documentation projects for FACC-Interieur and FACC-Structure are an essential basis for successful project handling," explains **Mr. Werner Schadelbauer**, General Manager of HICO.

The previous projects were primarily implemented according to the specifications of the ATA e-Business Program (ATA iSpec 2200 and ATA Spec 2000).

NEWS RELEASE

HICO as full-line supplier for technical documentation will provide the services in this project. HICO is responsible for the creation, management, publishing, change management and delivery management of the technical publications.

In the context of the implementation of S1000D v4.1, HICO provides a solution approach that ensures system implementation in the shortest possible time. The time span from the first process conference (S1000D Business Rules/BREX definition) to the launch of the production system is only four weeks.

"The HICO S1000D Suite™ makes writing and maintaining technical publications very easy. The reduction of editing efforts and also illustration efforts is ensured by a high level of automatization of the working and publishing processes. This enables the IPS-Engineering Team to deliver the technical publications in the required time with high quality at the same time. The use of HICO tools has massively simplified the work of the IPS-Engineering Team and increased productivity. This allows the team to focus on the technical content and quality, which ultimately guarantees the success of the project."

[Mr. Alberto HÜTTER; Director IPS-Engineering Services]

HICO's business model for documentation projects is based on the synergy of HICO nearshoring capabilities in the Czech Republic, HICO IPS-Engineering competence centers in Prague and Montréal and strategic international alliances with IPS & documentation service providers for defined market segments and regions. The success formula is a simple, pragmatic and trustworthy project approach based on extensive experience in implementing S1000D and "S-Series IPS Specifications" projects in an international context.

About THE HICO CORPORATE GROUP

HICO has been a full-line supplier of efficient software solutions and Professional Services for "Integrated Product Support (IPS)" or "Integrated Life Cycle Support (ILS)" since 1997.

HICO offers the full range of services for sustainable IPS-Business Solutions from a single source: market-leading IPS-Business Applications, Consulting & IT Services for tailored end-to-end IPS/ILS customer solutions and IPS-Engineering Services.

This includes specialized solutions for Technical Documentation & Communication, Integrated Material Management, Supportability Engineering & Product Support Analysis (PSA) including Maintenance Engineering and Training Support. HICO is headquartered in Austria with subsidiaries in Canada, Czech Republic and Germany. International representation via OEMs and business partners acting globally.
